Reporting an Incident

Submitting a report with photos and an exact map location

Help Centre User Guide

When should I report an incident?

Report anything that affects safety on campus: theft, assault, harassment, suspicious activity, vandalism, or a medical situation that campus security should know about. Your report places the incident on the security team's live map and helps make walking-route advice more accurate for everyone.

> **Emergency:** If you are in immediate danger, do not fill in a report form. Go to the red **SOS** button in the menu and use it instead — it dispatches the nearest officer to your live GPS position right away.

Submitting a report step by step

1. Click **Report Incident** in the navigation bar.
2. Choose the **category** that fits best (theft, assault, harassment, suspicious activity, vandalism, medical or other).
3. Set the **date and time** the incident happened. It defaults to now — change it if you are reporting something from earlier.
4. Describe what happened in the **description** box. Mention people, directions they went, and anything distinctive.
5. Click on the campus map to **drop a pin** exactly where it happened. Zoom in for accuracy.
6. Optionally attach up to **3 photos** as evidence (JPG or PNG, maximum 5 MB each).
7. Click **Submit**. You will see a confirmation with a reference code like **CS-1A2B3C4D** — keep it for follow-ups.

What happens after I submit?

Supervisors are notified immediately and your report appears on the security map. The report then moves through a status workflow which you can follow on the **My Reports** page:

Status	Meaning
New	Your report has been received and is waiting to be reviewed.
Acknowledged	Security has seen your report and accepted it.
In Progress	An officer is actively working on or responding to it.
Resolved	The matter has been dealt with and closed.

Tip: You get a notification every time the status of your report changes, so you do not need to keep checking the page. Watch the counter on the **Notifications** menu item.

Good to know: Photos really help. A picture of a broken lock, damage, or the area involved makes it much faster for the security team to assess and act on your report.
