Using the SOS Button

One-tap emergency help, dispatched to your live GPS location

Help Centre User Guide

What the SOS button does

The red **SOS** button in the navigation bar is for emergencies where you need security at your location as fast as possible. One tap broadcasts your live GPS coordinates to Security Dispatch, and the nearest on-duty officer is sent to you. You do not need to type anything.

> **Emergency:** Use SOS when you feel threatened, are being followed, witness violence, or face a medical emergency. For non-urgent matters (something was stolen yesterday, broken lights, etc.) rather use **Report Incident**.

Triggering an SOS alert

1. Click the red **SOS** item in the navigation bar.
2. Allow the browser to use your **location** if it asks. The page shows "GPS Ready" with your coordinates once it has a fix.
3. Tap the large red **SOS** panic button.
4. Stay where you are if it is safe to do so. The page switches to a live status panel — help is on the way.

Following the response live

After you trigger SOS the page shows a four-step tracker that updates automatically:

Step	What it means
1. Emergency Signal Sent	Your coordinates were broadcast to Security Dispatch.
2. Officer Dispatched	The nearest on-duty patrol has been assigned to you.
3. Officer En Route	The officer is moving to your pinned position.
4. On Scene & Safe	Security has arrived to secure the area.

Pressed it by accident?

1. On the active SOS panel, click **Cancel Alert (Accidental)**.
2. Confirm the cancellation when asked.
3. The alert is withdrawn and dispatch is informed. Nobody will be in trouble for an honest mistake — cancelling quickly keeps officers free for real emergencies.

> **Important:** Keep location services enabled on your phone or laptop. Without GPS permission the system uses an approximate campus position, which can slow the response down.
